Subject: Crandall drill hole meeting notes
Attachments: 09072007Meeting Notes.doc

Hello Pam,

Friday, Sept. 7, the weather allowed us to reach the drill hole sites. Adam Robison, SITLA Forester; Tom Lloyd, USFS; Dave Shaver and Mike Glasson, UEI; and Shane Campbell, SCAMP Excavation, Inc. were all there along with Karl and me. Attached are the meeting notes. All of the participants have had an opportunity to comment on the notes.

Tomorrow, I will bring to SLC a hard copy of these notes, along with MSDS sheets and seed mixes, wood straw, and excelsior log information to send to the 015032 2007 Internal File.

Since our site visit, an interim and final seed mix has been developed by USFS and SITLA. The re-alignment of the road on SITLA ground has been determined to be necessary as a safety precaution and as a sediment control measure. According to Dave Shaver, that work can proceed while we wait for the drill rigs to arrive. Drill rigs should arrive in 2 - 3 weeks to begin plugging the wells.

Priscilla.
